What do you consider to be the ^bigger software-related risk faced by our society at this moment?

- Data privacy
  - ID theft

- Copyright infringement
  - Fraudulent reproduction
  - Phishing
  - "Hacking"
  - Backdoor entry
  - Bug injection

- Ransomware

- Long term impact of social media use
  - We have some awareness now

- Misinformation
  - Policy
  - User responsibility?
  - Easy to have a big platform
  - Rate of data exchange
  - Age of audience

- Addiction
  - Flashy
  - Habitual use
  - Vague/Clickbaity notification
  - Autoplay features

- Accessibility

- Outdated software
  - Obsolete
  - Not secure
  - Lack of documentation

- Software monopolies
  - But you trust them?
  - Too much control
  - Single point of failure
  - e.g. Google presenting a political opinion
    - bias search results
    - echo chambers
  - Bi. Too much competition (?)

What's the best thing software brings to society?

- Automation
  - Loss of jobs *
  - AI - enabled medical diagnosis
  - Accelerated research
  - Data volume increase
  - Medical technology
  - * but easier to look for jobs

- Entertainment

- The Internet
  - Global connection
  - Access to information
  - Long - distance communication

- Safety engineering
  - Large improvement

- Improved accessibility solutions
  - SH's voice

How should ethical responsibility be distributed between developers / users / clients?

- Audience - dependent
  - Hard to prove audience age
    - Without privacy invasion
    - Some platforms aren't anonymous
    - ID verification

- The bigger the software, the more responsible the company should be

- Collected data
  - Must be kept secure
  - Do you trust services?

- Users are willing to make bad decisions
  - Societal norms

- Terms & conditions
  - Legalese too long for users
  - tl;dr would be beneficial
  - Conflicted interest user vs company
